LANGUAGES

- English
- Spanish

CAN LEGALLY WORK IN:

- Canada
- United States
- Colombia

ABOUT ME

Hi, I'm Zoey! I am a full stack web developer who specializes in modern web technologies. I am an expert in web app development using **JavaScript/TypeScript** and **React**. I have experience working with small and remote teams and I am looking for an opportunity to work on challenging projects where my skills can be utilized and improved upon, and where my work will add real value.

WORK EXPERIENCE

Lead Front End Developer   2018 – 2022
Shed Suite | Sarasota, FL

Contributed to the success of a complex business management solution for portable shed manufacturers. I was primarily responsible for the development and maintenance of our various applications. I was initially hired to work on the front end of our web apps, but quickly started picking up tasks on the back end as well as our mobile app.
While at Shed Suite, I implemented new modules and features on the front end, improved user experience on existing pages, made our views more responsive, and oversaw the development of our new eCommerce platform.
In addition to writing code, I also interviewed candidates for developer positions, on-boarded and oversaw junior developers, and exposed and mitigated security vulnerabilities in our platforms.
Skills: React, Redux, Typescript, Next.js, Firebase, GraphQL, Apollo, PostgreSQL, React Native, Moleculer, Node.js, Express.js, Materialize UI

Front End Developer   2017 – 2018
Language in Motion | Remote, USA

Worked with a diverse, remote team to develop and maintain an advanced language learning platform. As a member of the front end team, I worked to maximize efficiency and user experience within a complex React.js environment. My responsibilities involved building new, responsive views, adding new features, improving responsiveness, fixing bugs, and updating the React state management from Flux to Redux.
I look back at my experience with Language in Motion as wonderful learning experience that gave me the oportunity to master my front end skills and prepare me for future roles.
Skills: React, Redux, Flux, Ruby on Rails, responsive front end development, Semantic UI

Teaching Assistant   2017 – 2018
The Coding Bootcamp at UNC | Chapel Hill, NC

Supported an intensive, 6 month coding bootcamp based out of UNC Chapel Hill involving 250+ hours of in-class teaching through an extensive curriculum using HTML 5, CSS 3, JavaScript, jQuery, Git, Node.js. Express.js, MySQL 5, Laravel, TDD, SEO, and cloud application development.
I enjoyed my time at the Coding Bootcamp, the students and staff were a delight to work with and I learned a lot from the instructors and through working with the students. I do not plan on working another teaching job however, because I realize I still enjoy writing code more than I do teaching it.
